THREE PLANET TABLES FOR 2021-2022

Use these tables to check your Lunar Highs (and Lows) for any month up until the end of 2022. (You'll only need the left hand table, of course.) Due to space restrictions they only show the first two letters for each sign - so: Ar. (for Aries); Ta. for Taurus; Ge. for Gemini, and so on (although Cancer is Ca. and Capricorn is Cp.) Most of the time you can just check against the relevant date for each month, so if you're a sun Libran, your Lunar High is when the moon is passing through Libra.

The tables show the moon's position at midnight - the start of a brand new day - and give its actual degree/minute in any sign (which has thirty degrees; minutes go from 0 to 59). It takes about two and a half days to get through a sign (roughly one degree every two hours). However, things aren't always so nice and neat; for example, at midnight on July 9th 2022, the moon is 10 degrees Scorpio - Scorpio's Lunar High. But this means it began in Scorpio the previous day, about twenty hours before. (One degree every two hours, remember.) All that's required is a bit of basic arithmetic! You can then check out what the Lunar Highs and Lows mean on www.astro.nu.

If you want to know when the New and Full Moons occur (plus any eclipses), they are given at the foot of each table. For example, there is a Full Moon in Taurus on November 19, at 19 degrees. It's also a time of the Lunar Eclipse, when the Earth sits between the sun and the moon. (All of which is explained fully in *Astro Magic*.)

Be lucky! - James Lynn Page
