II

The High Priestess

King of Pentacles

Three Planet Tables for 2023-28

These tables are for use with checking the positions of the Moon and Jupiter when plotting your best days, or timing personal, magical rituals as described in my book Astro-Magic. Here's how to use them:

1. To check your Lunar Highs (and Lows) for any month from January 2023 up until June 2028.

Due to space restrictions the tables only show the first two letters for each sign – so: Ar. (for Aries); Ta. for Taurus; Ge. for Gemini, and so on (although Cancer is Ca. and Capricorn is Cp.) And so, **8Cp17**, for example, means a planet at 8 degrees and 17 minutes of Capricorn. Most of the time you can just check against the relevant date for each month, so if you're a sun Libran, your Lunar High is when the moon is passing through Libra.

The tables show the moon's position at *midnight* – the start of a brand new day – and give its actual degree/minute in any sign, which has thirty degrees (minutes - as with your clock - go from 0 to 59). It takes about two and a half days for the moon to get through a sign (roughly one degree for every two hours).

However, things aren't always so nice and neat; for example, at midnight on December 22nd, 2022, the moon was at 10 degrees (and 11 minutes) of Sagittarius – Sagittarius's Lunar High. But this means it *began* (at 0 degrees) in Sagittarius the *previous day*, about twenty hours before, therefore at 4 a.m. on the 21st.

(One degree every two hours, remember.) All that's required is a bit of basic arithmetic! You can then check out what the Lunar Highs and Lows mean in the Preface to *Astro-Magic*.

2. To check when there is a New Moon, Full Moon, or Eclipse (solar or lunar) and if it is linking to your chart.

When you need to know when the dates of the New and Full Moons occur (plus any eclipses), they are given at the foot of each table. For instance, there is a Full Moon in Taurus on October 28th, 2023, at 5 degrees. It's also a time of the Lunar Eclipse, when the Earth sits between the sun and the moon.

All of this is explained fully in *Astro Magic*, but let's try another example to see how we can use such info: look at the foot of the table for January 2023, and you can see the Full Moon was in Cancer on the 6th, and it occurred at 23:08. (Don't worry about the given time – we all keep different time around the world.)

You can also see it occurred at 16°22' of Cancer. So, find your birth chart – are there any planets there at 16° Cancer? What about your rising sign or MC? What about 16° Capricorn, Cancer's opposite sign? (you can check which are the opposite signs in the list in the Preface.) If so, this Full Moon contacting planets on your chart is important. Look up the interpretations for the Lunations in Chapter Five and see what likely changes are in store or if its time to activate certain plans.

Using the same example - look at your chart and find the sign of Cancer. Now, what astrological *house* was the Full Moon in for 16°22' of Cancer on that day, Jan. 6th 2023? Go to chapter Six to discover how you can create magic related to any astrological house with spells or visualisation techniques.

3. To check when Mercury is going retrograde.

To find out when Mercury is temporarily moving backwards, run your finger down the column for Mercury until you find a capital 'R' highlighted in yellow. This is the day when the planet of communication and travel, Mercury, goes retrograde. As you move down the column, maybe into the following month, a capital 'D' will appear highlighted in red – meaning it is now going Direct. (Until the next retrograde.) You can find out what this all means in the Afterword to this book – you may want to check your daily schedule when Mercury is apparently moving backwards.

4. To check if Jupiter is contacting any of the planets on your birth chart. In chapter Seven, I explain how to find out – using the Cross Table from the same chapter - if Jupiter is linking to your birth chart on any one day and mention all of the possible influences it might have. As you can see it takes about 4-5 days to cover one degree of the zodiac.

If any of these degrees are important on your birth chart, Jupiter is doing something right now! Briefly, though, and continuing with our example, go the Cross Table in chapter Seven and the column containing Cancer. You'll see it's in the Cardinal section, along with Aries, Libra and Capricorn. Now, if you have *any* planets at 16° Aries, Cancer Libra or Capricorn (or a rising sign or Midheaven) the Full Moon is going to activate one or more of them. All you need to do is look up the interpretations.

Three Planet Tables for 2023

		Moon ☾	Mercury ☿	Jupiter ♃
